"Left in SELLER wallet" = live RAIN balance of the selling wallet itself at generation time; "Left in FUNDER wallet" = balance of the wallet that originally funded it. USD under every amount uses the current price $0.003935. "Acquired from" = where the wallet's tokens originally came from (Claim contract / DEX / Exchange / named wallet). "Funder" = wallet that sent the first tokens in; "!• X" = the funder itself was funded by X.

Known sellers — last 48h (1 wallets, 5,011 RAIN = $20, 100.0% of all selling)

Only wallets we can identify: the wallet itself is in our data (named / registry category / launchpad customer / private-sale claim), or the wallet that funded it is a known user wallet or claim contract (directly or one hop up). Exchange-funded and anonymous wallets are left out. Bots and arbitrage wallets are kept but flagged in the "Note" column.
